Summary

Backend-focused full-stack engineer with 3+ years building cloud-native systems using Node.js, React, PostgreSQL, and AWS, delivering high-traffic real estate and insurance platforms (10K+ MAU).

Deliver 30–40% efficiency gains and measurable latency, reliability, and scalability improvements through optimized APIs, RBAC, database indexes, and production-grade CI/CD, caching, and observability.

Technical Highlights / Core Strengths

- Design RESTful services and backend APIs in Node.js/Express focused on scalability, reliability, and clear contracts.
- Model schemas, add indexes, and tune queries in PostgreSQL and MongoDB to reduce latency and CPU load.
- Deploy containerized applications with Docker on AWS ECS, integrating RDS, S3, and CloudFront for high availability and scalability.
- Implement authentication/authorization, RBAC, and secure token-based flows with JWT.
- Build CI/CD pipelines with GitHub Actions, plus automated checks to support frequent, low-risk releases.
- Introduce caching, structured logging, and lightweight monitoring to improve reliability and MTTR.

Skills

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI, RESTful API design, JWT/OAuth, background jobs

Frontend: React.js, Next.js, Nuxt.js, Context API, Redux / state management, Framer Motion

Databases: PostgreSQL, MongoDB, Prisma ORM, Mongoose, schema design, indexing, query optimization

Cloud & DevOps: AWS (ECS, RDS, S3, CloudFront), Docker, Nginx, GitHub Actions CI/CD

System Design & Ops: Distributed systems fundamentals, microservice-style decomposition, caching, API rate limiting, logging, monitoring dashboards

Tools & Practices: Git, Jira, Postman, Agile/Scrum, debugging, performance profiling

Experience

Full Stack Developer | Hexadecimal Software Pvt Ltd, Noida | July 2023 – Present

- Architect HexaHome backend for a real estate platform with 10K+ monthly users using Node.js, Express, PostgreSQL, and Prisma, reducing average API latency by ~30% through schema redesign and query tuning.
- Deploy containerized services on AWS ECS with RDS and CloudFront, improving regional page-load times by 25–35% and maintaining >99.9% uptime on core flows.
- Implement RBAC and authentication with JWT and refresh tokens for admin/owner/tenant roles, cutting access-related support tickets by 50% and tightening authorization boundaries.
- Optimize listing and search endpoints with caching and indexed fields in PostgreSQL, increasing throughput by ~40% under peak load while keeping P95 latency sub-second.
- Build a GitHub Actions + Docker based CI/CD pipeline with automated checks, reducing deployment time by 50% and enabling multiple safe weekly releases.
- Add structured logging, health checks, and lightweight monitoring (latency, error rates), improving incident MTTR by ~30% and simplifying production debugging.
- Introduce TypeScript and unit tests with Jest on new Node.js modules, reducing type-related and regression bugs in core APIs.

MERN Stack Developer | Ekana Technology Pvt Ltd, Lucknow | July 2022 – July 2023

- Deliver a broker-facing insurance tracker portal (UIIB) using Nuxt.js, Node.js, and MongoDB, automating CSV imports and renewal workflows to reduce manual policy tracking effort by ~40%.
- Design MongoDB schema with appropriate indexes and implement REST APIs in Node.js, cutting complex policy/customer lookups from seconds to sub-second responses while supporting 10K+ policies.

- Build a premium calculator and analytics dashboard in Nuxt.js, giving brokers real-time visibility into renewals and risk and reducing spreadsheet-based workflows.
- Harden backend Node.js services with validation, rate limiting, and structured error handling, decreasing 5xx and validation-related issues by an estimated 25–30%.
- Add integration tests for critical Node.js endpoints using Supertest, improving deployment confidence and reducing production rollback incidents.
- Partner with senior engineers on API contracts, pagination, and filtering to keep the system performant as data volume and active users increased.

Projects

HexaHome – Cloud-Based Real Estate Platform | Node.js, Express, PostgreSQL, Prisma, Next.js, AWS ECS/RDS/CloudFront, Docker

- Develop REST APIs for listings, search, profiles, and inquiries in Node.js, handling thousands of daily requests with sub-second P95 latency.
- Optimize PostgreSQL schema and add indexes on high-cardinality fields, improving complex queries by 35–40% and lowering DB CPU utilization.
- Deploy Dockerized services on AWS ECS with RDS and CloudFront, enabling horizontal scaling during traffic spikes without major code changes.
- Add centralized logging and health checks on key endpoints to support high availability and faster debugging of production issues.

Insurance Tracker Portal (UIIB) | Nuxt.js, Node.js, MongoDB, Docker

- Implement ingestion pipelines in Node.js to validate and persist broker CSV uploads into MongoDB, cutting onboarding time for large policy batches from hours to minutes.
- Configure indexed policy search, filters, and renewal reminders to enable near-instant retrieval of targeted segments and reduce missed renewals.
- Containerize services with Docker for consistent dev/prod environments, lowering configuration-related issues.

Production-Grade Developer Portfolio & Contact Platform | React, Framer Motion, Netlify Functions, Node.js

- Build a responsive portfolio in React with Framer Motion, using lazy loading and bundle optimizations to keep initial load fast on mobile and low-bandwidth connections.
- Implement smooth section-based navigation, scroll-triggered animations, and dark/light themes to showcase modern frontend architecture, UX, and performance-conscious React practices.

NFT Marketplace (DApp) – Prototype (De-emphasized) | Hardhat.js, Solidity, Web3.js, React, Metamask

- Prototype an NFT marketplace using Solidity and Hardhat.js, integrating Web3.js and Metamask in React to explore wallet-based auth and on-chain transaction flows.

Education

Master of Arts (MA) | Subharti University, Meerut | 2018

Certifications

1 Year Industrial full stack developer training from SPVAIG Software Pvt Ltd. Varanasi, UP.
